

Wood Waste Eligibility Assessment Sheet

Category 2: Manufactured wood product or by-product from a manufacturing process [Renewable Energy (Electricity) Regulation 8(1)(b)]

Records are to be retained for each delivery. Where multiple deliveries (truckloads) have been sourced from a single site (for example, delivery of 10 truckloads of pallets from a single waste depot), details of all loads from that site can be recorded on a single form. Individual records should be retained for all separate loads sourced from different sites.

Description of material:			Location(s) where wood waste was collected and dates:
Is the wood waste, as delivered to the power station, visibly identifiable as a manufactured wood product or a by-product from a manufacturing process	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Name of company collecting the wood waste from the site where it was created:
If no, where was the visibly identifiable manufactured wood product or a by-product processed, for example, into wood chips.			Name of power station where wood waste is utilised for electricity generation:

Delivery recording sheet

Sellers details				Buyers details			
Date(s) and time(s) of collection of manufactured wood product or by-product from a manufacturing process site	Dedicated load or mixed source load (estimate % of load from this site)	Name of contractor collecting manufactured wood product or by-product from a manufacturing process site (include truck number plate details)	Intermediary handlers – list all names and dates of exchange and amounts/volumes changing hands	Tonnes received at power station (weighbridge docket – net of vehicle)	Delivery date and time	Delivered by (include company name and truck number plate details)	Signature of receiver
